Introduction

Welcome to eZAutomate, the advanced Functional Testing and regression test automation Solution.

eZAutomate introduces a next generation easy-to-use solution to automate unit, system integration, functional, smoke, sanity and regression testing of Web, Window, SAP, Mobile, Oracle- Ebusiness Suite, Mainframe, As400 applications. It deals with business process testing (BPT) concept to enhance test creation and maintenance. BPT uses Keyword-driven testing technique in which keyword test scripts are logically organized for end to end business test scenarios.

Key advantages of eZAutomate

- Smart combination between keyword, data driven and capture methodologies; it is capable to read the keyword actions at the object level and grouping actions which reduces maintenance time and test design time.
- It is a user-friendly interface to generate keyword driven business components (BC) for given business logic extends keyword driven BC to Data-Driven BC generate test cases for end to end business scenarios by grouping various business components.
- It provides a platform adapted to the needs of different projects for automated script development and execution.
- It is capable of testing single applications in different test environments with the help of a centralized automation code/data repository.
- On-click it defines/creates all elements of a test, business workflow and test data which eliminates the need to write code like scripting languages and hence does not require specialized skills to write automation scripts.

System Requirements

The following system requirements are mandatory for proper functioning of eZAutomate:

.net framework 4.7.2

Operating System

The following operating systems are supported:

- Windows 7 or higher Version supported
- Windows 10 (x86/x64)
- Windows 8.1 (x86/x64)
- Windows 7 (x86/x64)

Data Base

- SQL Server 2008 or above (locally or remote)

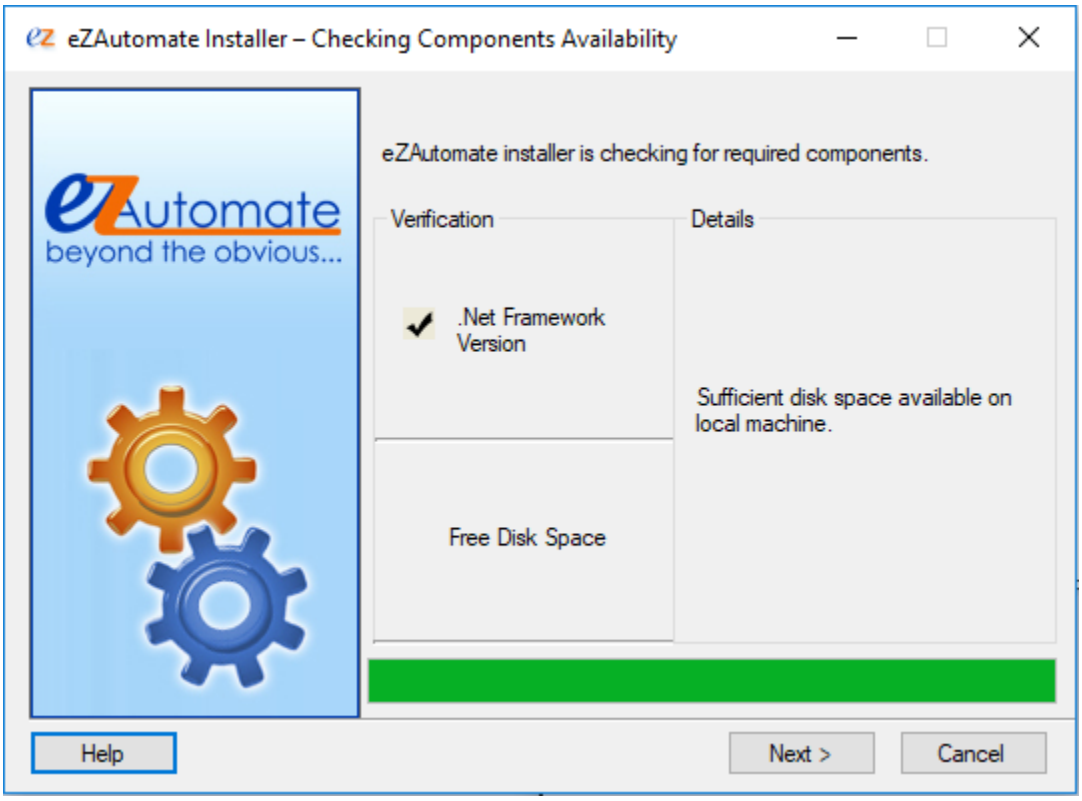
License Agreement

eZAutomate license agreement describes the terms and agreement for registered and unregistered users.

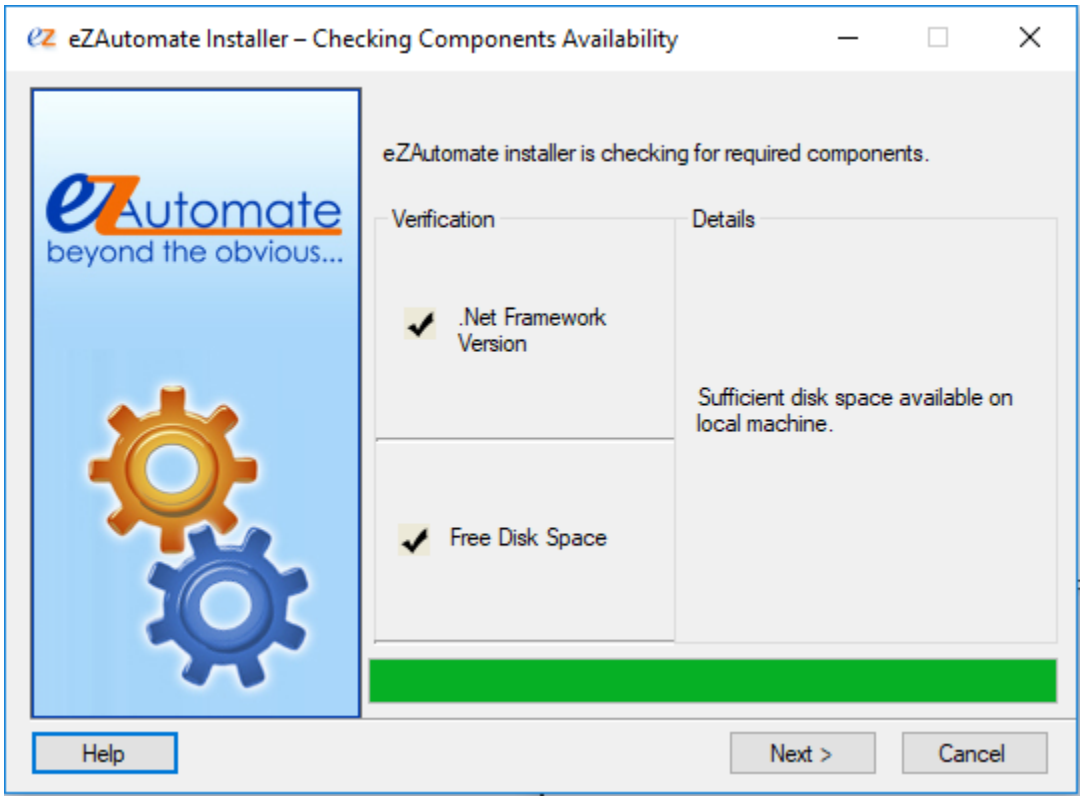
How to install eZAutomate

Step 1: After downloading the software, double click the .exe file and wait to get the below extract file Message.

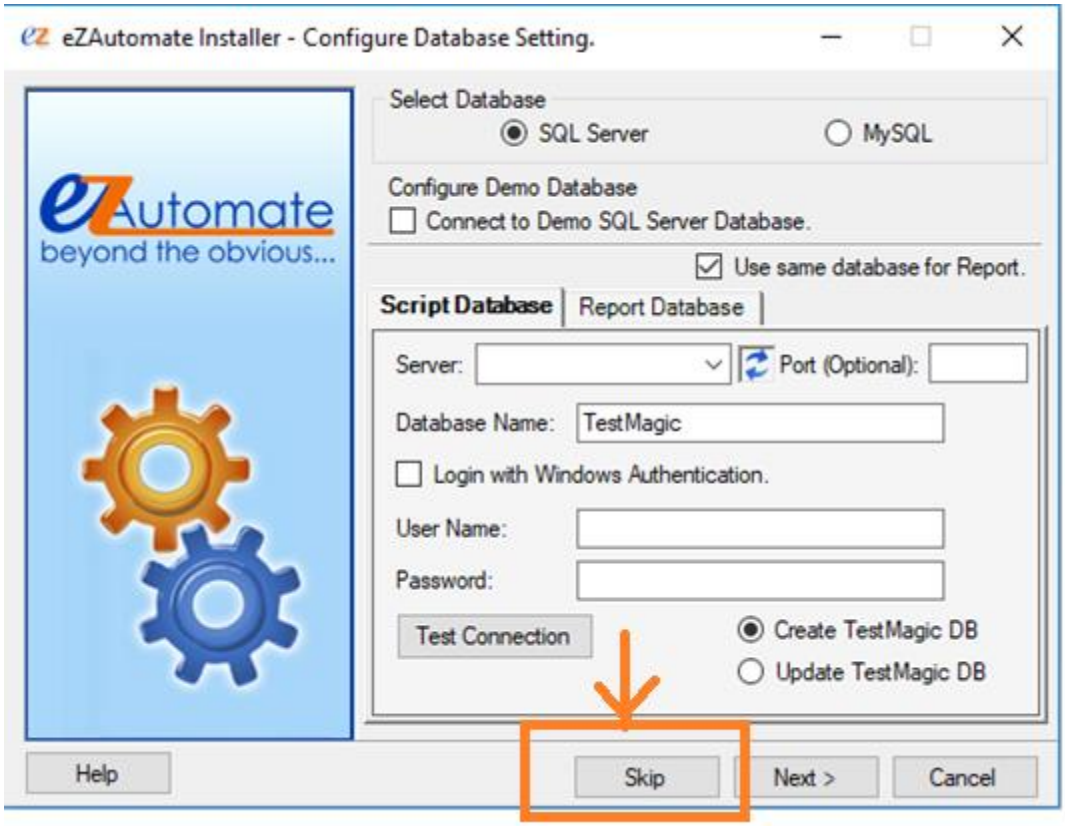
Follow the wizard



Click Next after Verifying the status and details of the required components as depicted below:



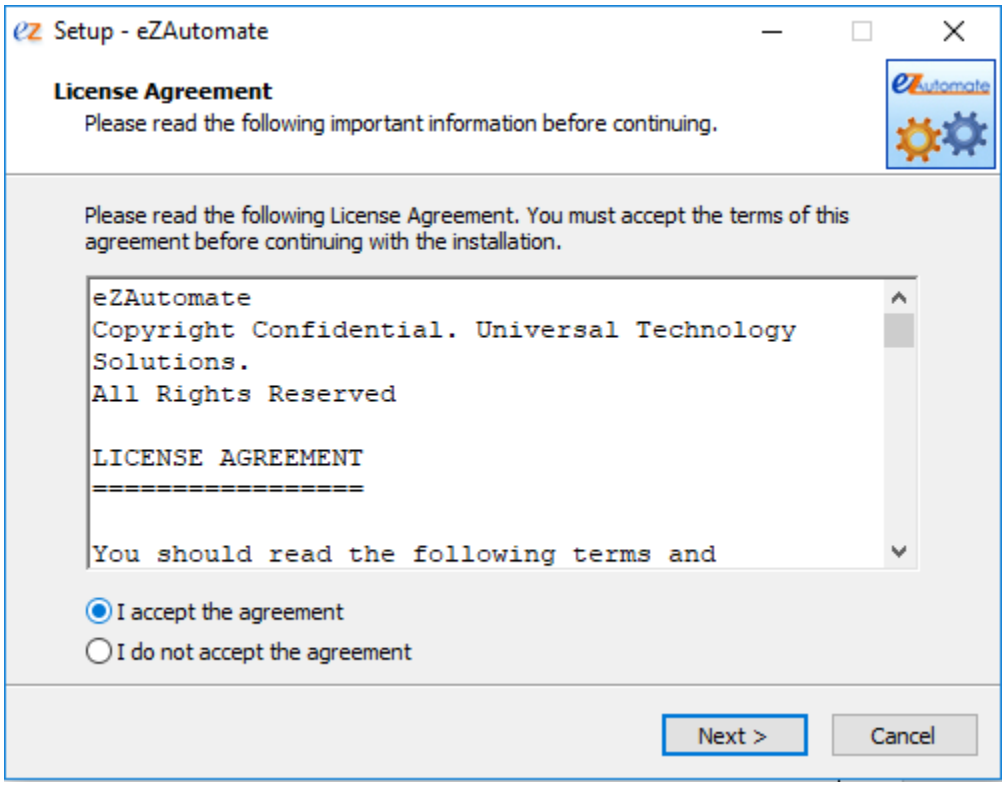
Step 2: This Step is to Skip the database creation as its already created.



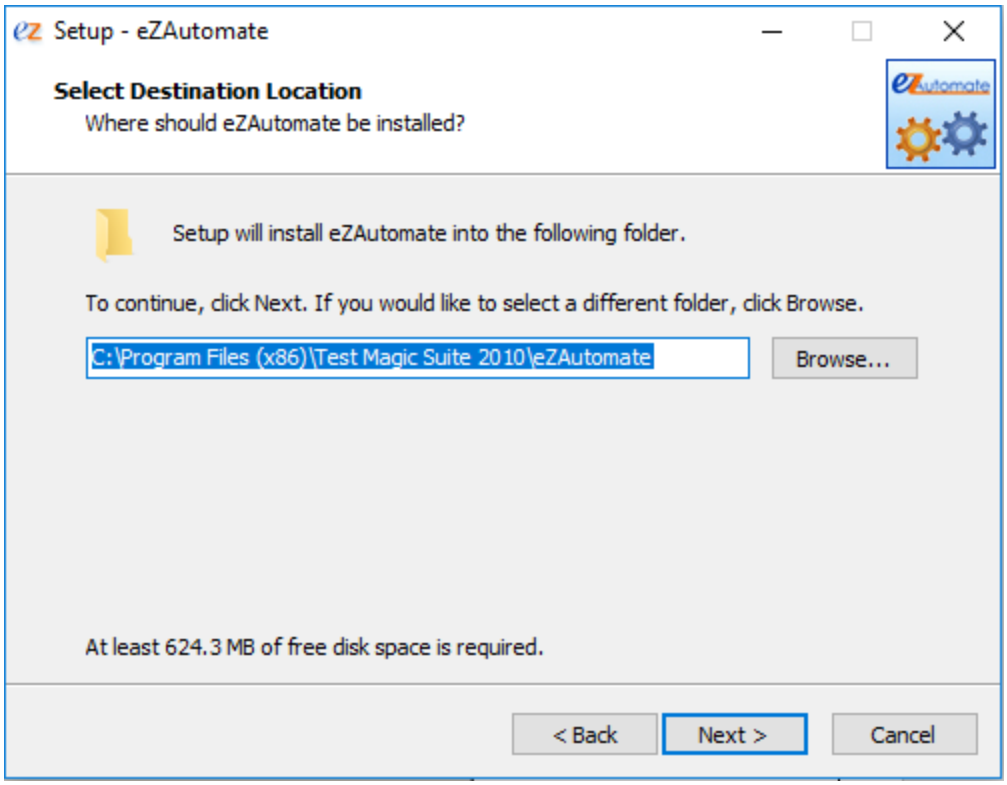
Note:

- *If you have already created a database schema for eZautomate , please click Skip and follow the subsequent steps.*
- *To create new TestMagic DB select "Create TestMagic DB " option and click Next*
- *To update existing DB with new released build select "Update TestMagic DB" option and click Next*

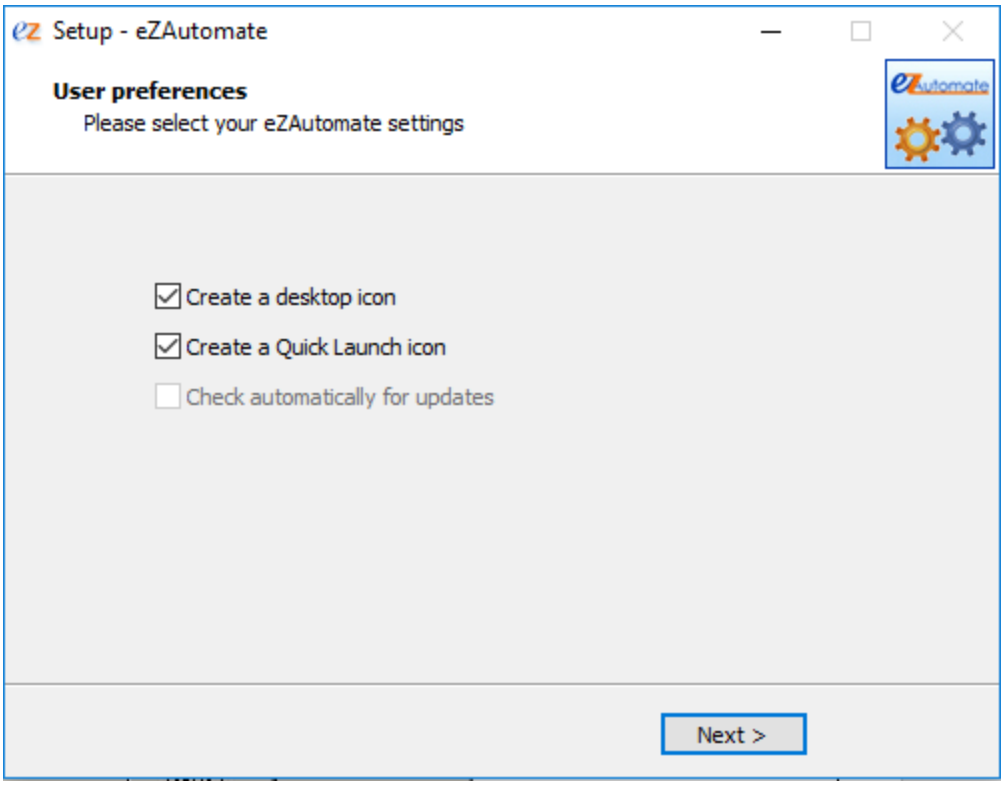
Step 3: Next is to accept the license agreement.



Step 4: Select the installation path.



Step 5: Select option for a desktop and/or quick launch icon.



Step 6: Click “Finish” to end the installation.

Copy the License file in Installed folder :

C:\Program Files (x86)\TestMagic Suite 2018\eZAutomate
