1 Introduction

1.1 Purpose

To capture objects of any application under test with the help of an image of those objects. This is an image-based capturing done in eZAutomate to navigate to objects without any properties or element locators.

In some applications you cannot view or locate the properties of objects (Textbox, Button, Checkbox etc) you want to capture for creating Business Components. You cannot get the locator in such applications. It is possible to capture those objects and execute Flash or Silverlight applications also using TestMagic. You can execute a Business Component based on matching image pattern.

Snipping tool: TestMagic has a snipping tool using which you snip and capture the desired object in an image form.

Figure 1: Snipping Tool

This document explains learning (Capturing) and performing (Executing) a Business Component in TestMagic having the below actions.

- ▶ IMSetText
- ▶ IMButtonClick
- ▶ IMListSelect
- ▶ IMVerifyTextContains
- ▶ IMRadioButtonSelect

- ▶ IMCheckBoxSelect
- ▶ IMVerifyImageContains
- ▶ IMRowClick
- ▶ IMRowSetText
- ▶ IMDoubleClick
- ▶ IMGetText
- ▶ IMVerifyTextExist
- ▶ IMMouseHover

2 Pre-requisites

In order to get the IM functions working you need the below:

- ▶ Installed JAVA version: **jre-8u192-windows-x64** only
- ▶ The display settings of your computer must be set on 100%

3 eZAutomate Execution Settings for IM Actions

1. **Match Criteria:** It is the minimum similarity percentage between the image of the AUT at the runtime and the one inserted in the Business Component. If both the images are similar to each other, either equal or above the **Match Criteria**, then only the AUT image will be identified during execution.

It is preferred to keep the **Match Criteria** as at least 90%.

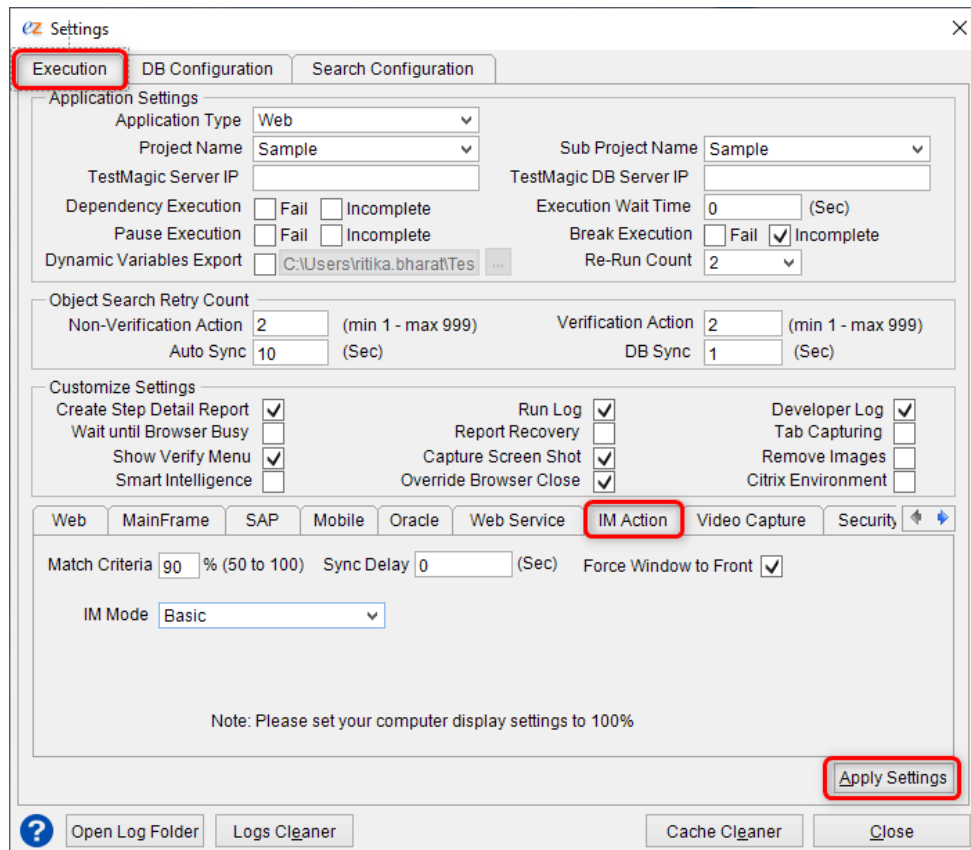

Figure 2: IM Execution Settings

2. **Sync Delay (in sec):** It is the delay in seconds which will be applied after every IM action only, used in the flow. It can be used as a buffer time given to IM action to ensure the execution of the action.
3. **Force Window To Front:** If selected, this will force the execution window to appear in the front.
4. **IM Mode:** Set the IM mode to **Basic**.

If actions are somehow not getting performed in **Basic** mode, you can try the **Advance** mode as well. In Advance mode, you need to configure the Java environment. Enter the JRE path of your local machine in **Java Path** textbox, as shown below. Then, click on **Set IM Configurations** button that will automatically configure and set the necessary environment settings. A successful message will get appeared, click **OK**.

Figure 3: Advance IM Mode

5. At last, click **Apply Settings**.

4 Setting up Environmental variables

Although, these settings are saved automatically by clicking on **Set IM Configurations** button, you can save the settings manually also. The steps for setting environmental variables are given below:

1. Right click My Computer or go to **Control Panel > System and Security > System** and click **Advanced system settings**.
2. In System Properties click **Environmental Variables**.

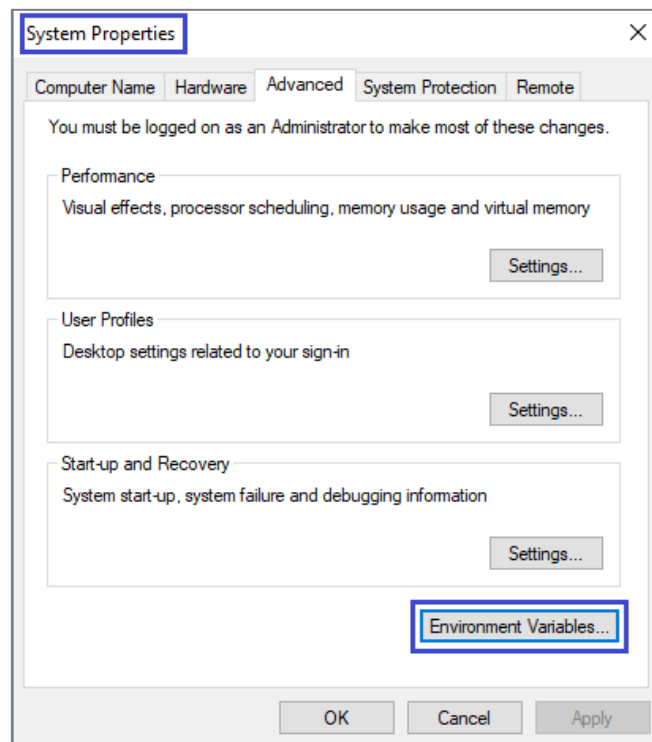

Figure 4: Environmental Variables

3. Create new path for **JAVA_HOME** in **User Variables** as below:
 - ▶ In **Variable name** enter **JAVA_HOME** (In capital letters).
 - ▶ In **Variable value** enter "**C:\Program Files\Java\jre1.8.0_211**".
4. Click **OK**.

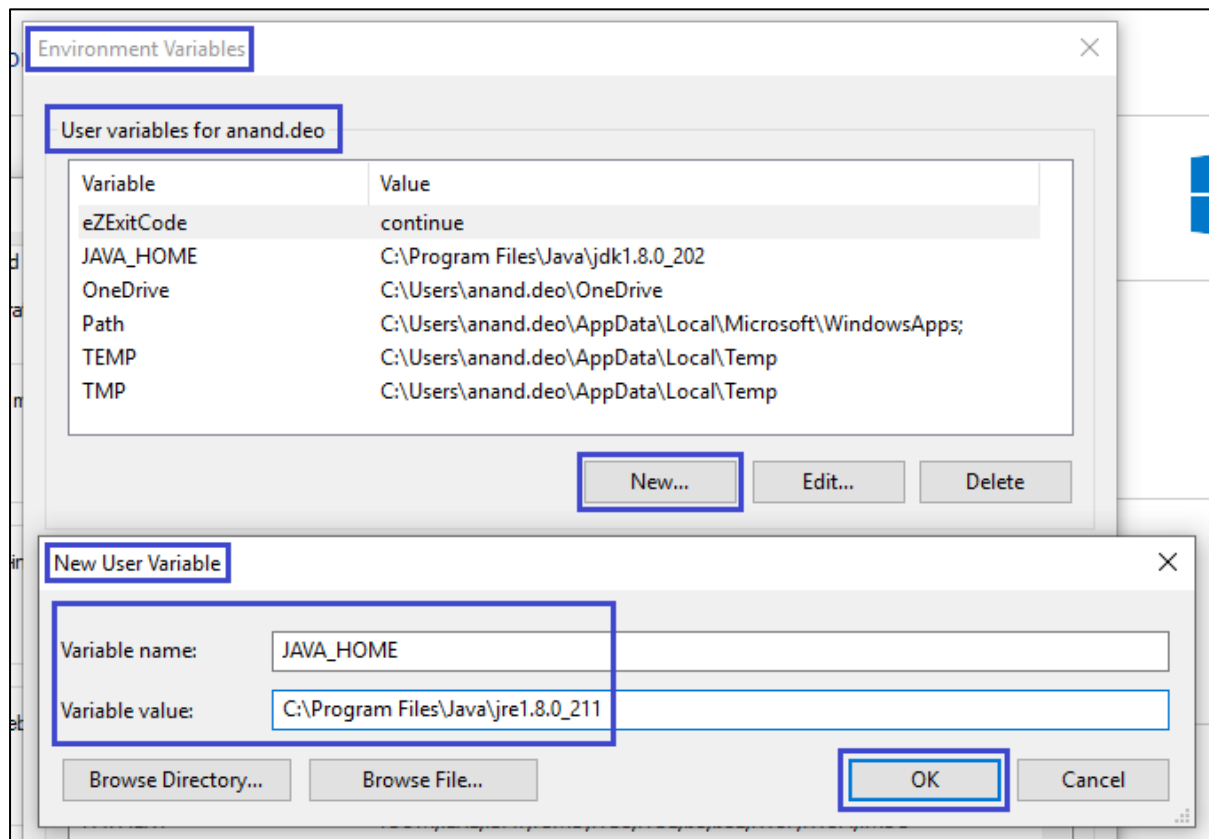

Figure 5: JAVA_HOME

5. In **User variables** click **New**.
6. In **Variable name** enter **SIKULI_HOME** (In capital letters). In **Variable value** enter the path of **Test Magic** (is installed) in which the **SIKULI** folder is ([TestMagic Suite 2018\ezAutomate\SIKULI](#)).
7. Click **OK**.

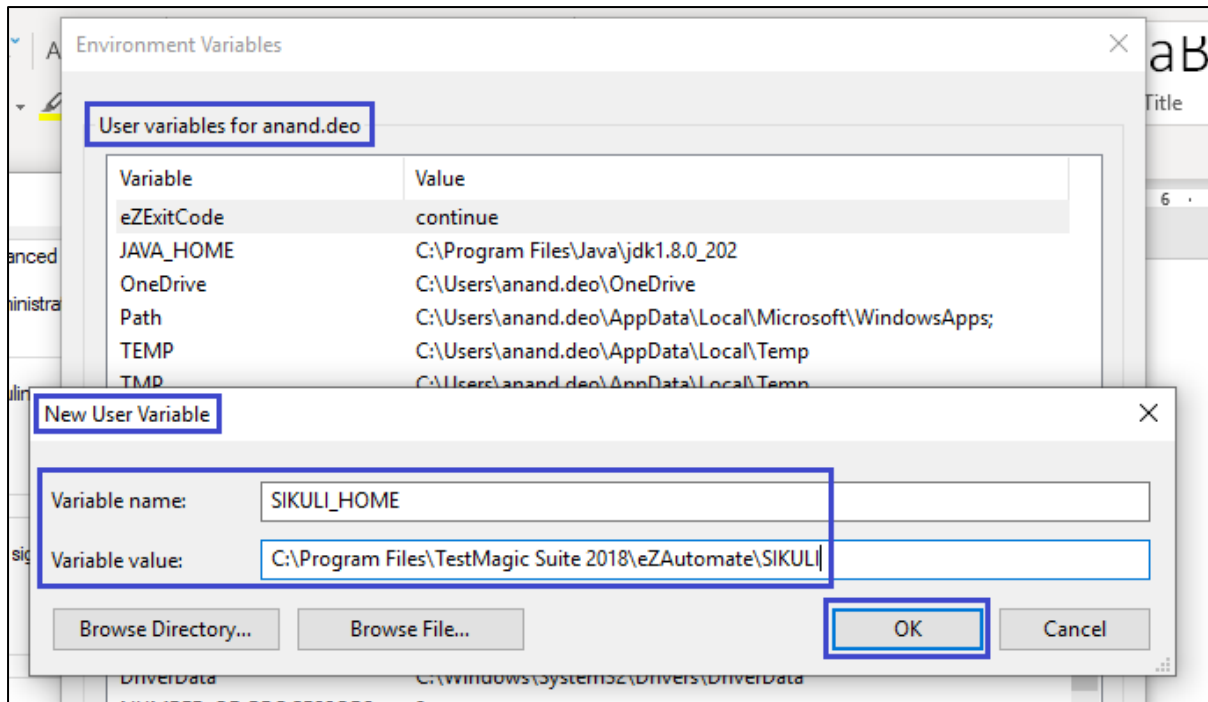

Figure 6: User Variable 2

8. In **User variables** select **Path** and click **Edit**.

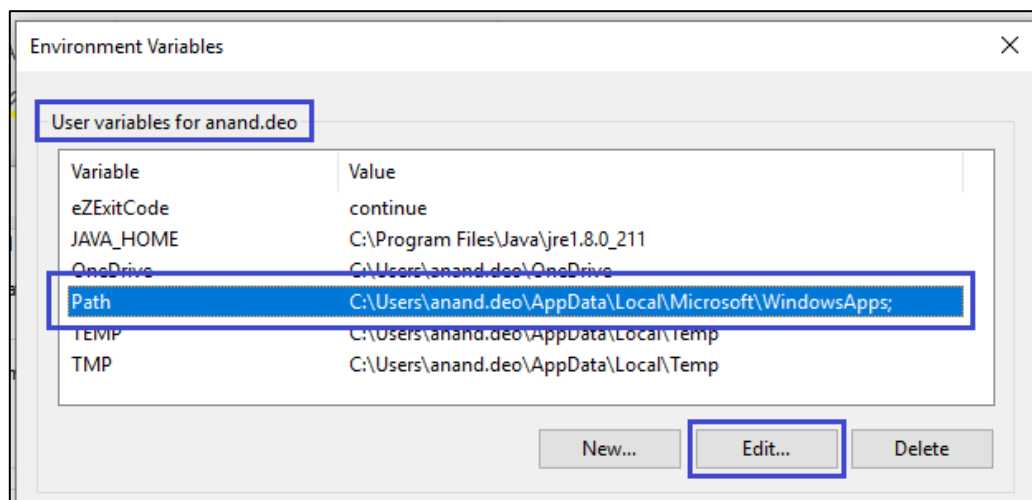

Figure 3: Edit Path

9. In **Edit environmental variable** click **New**.
10. Enter path "**C:\Program Files\Java\jre1.8.0_211\bin**"

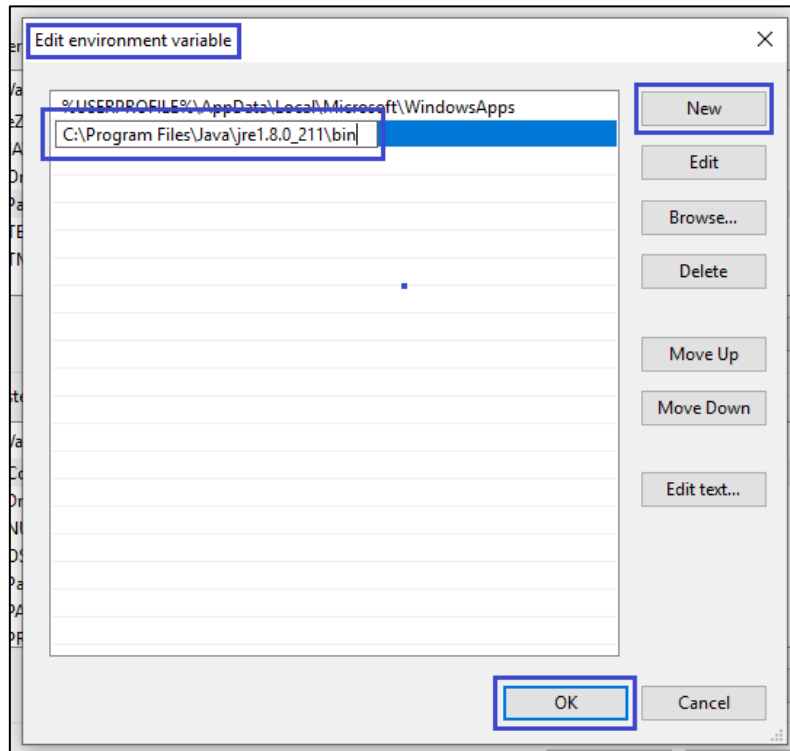

Figure 4: Edit environmental variable

Please note: If you Windows 7, please do the below:

1. In **Environmental variables** click **Edit**.
2. In **Edit User Variable** and append the exiting path. Use ";" at the end of existing path and provide **Variable Name** and **Variable Value** "**C:\Program Files\Java\jre1.8.0_211\bin**" and click **OK**.

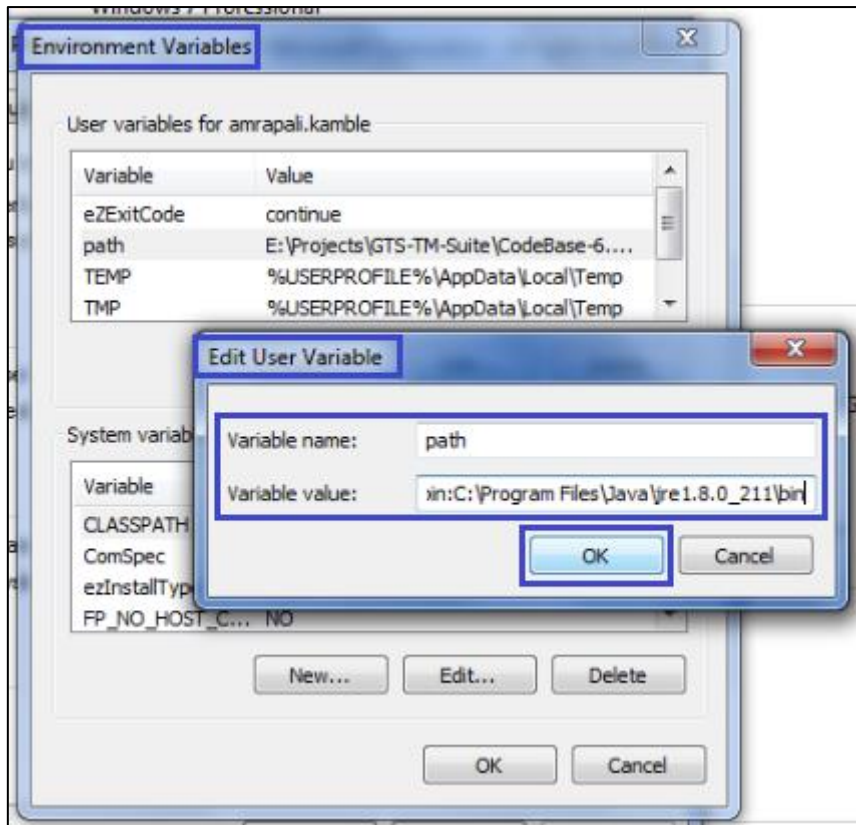

Figure 5: Edit Path for Windows 7

8. Click **OK**.

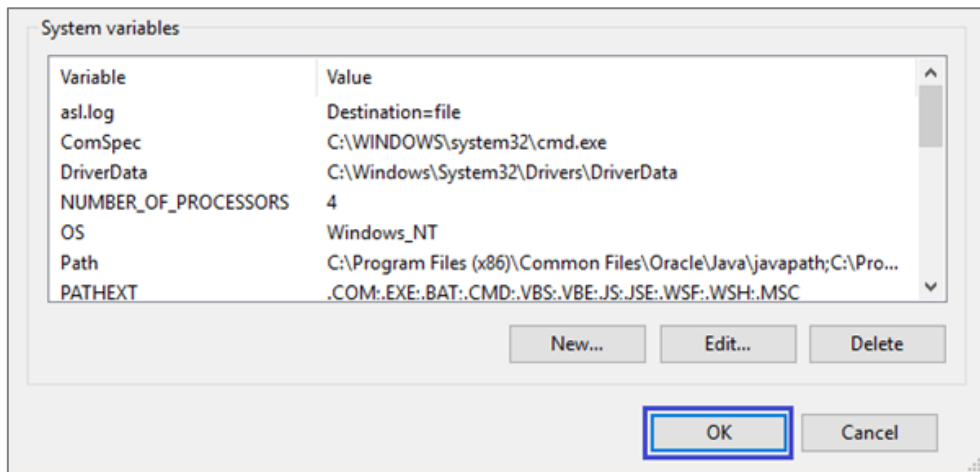

Figure 6: Save User Variables

5 Learning

Learning means capturing to create a Business Component in TestMagic. To use the functions mentioned in above point 1.1 Purpose, you need to do the following:

1. Open eZAutomate.
2. Start creating a new Business Component.
3. In URL column put the URL of the application.
4. Click **Learn On > Learn On > IE** (Select other option as per requirement).

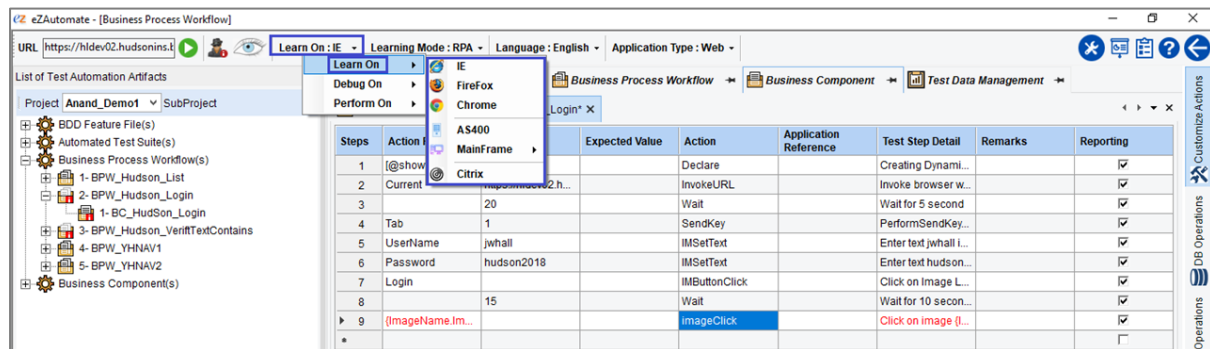

Figure 7: Learning

5. Click **Learning Mode**. Select **RPA** or **OBR**.
6. Click **Go** button to start learning.

Figure 8: Learning Mode

5.1 Using IM actions

In this document we have given example of creating a online registration for internet banking. **Please note:** This is for example purpose only.

5.1.1 Mandatory conditions

In order to get Business Component captured properly you need to make sure the below:

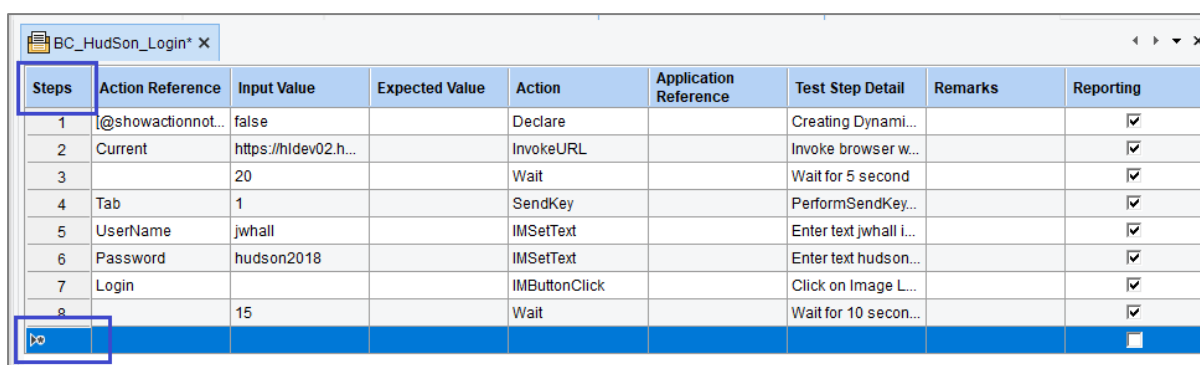

- ▶ Capture AUT in full screen mode.

5.1.2 Set Text (*Action- IMSetText*)

Set Text can be used by IM Action- **IMSetText** where you want to enter value in textbox. Consider below example based on which you need to follow steps to capture. In this we will capture "Username".

Please follow steps given below:

1. Select the step in the Business Component where you want to insert **IMSetText** in Key Word Script table. Click **Pointer** under Steps column.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	!@showactionnot...	false		Declare		Creating Dynam...		✓
2	Current	https://hdev02.h...		InvokeURL		Invoke browser w...		✓
3		20		Wait		Wait for 5 second		✓
4	Tab	1		SendKey		PerformSendKey...		✓
5	UserName	jwhall		IMSetText		Enter text jwhall i...		✓
6	Password	hudson2018		IMSetText		Enter text hudson...		✓
7	Login			IMButtonClick		Click on Image L...		✓
8		15		Wait		Wait for 10 secon...		✓
10								✓

Figure 9: IMSetText 1

2. Enter first letter "I" in Action Column.

3. Select **IMSetText** from drop down.

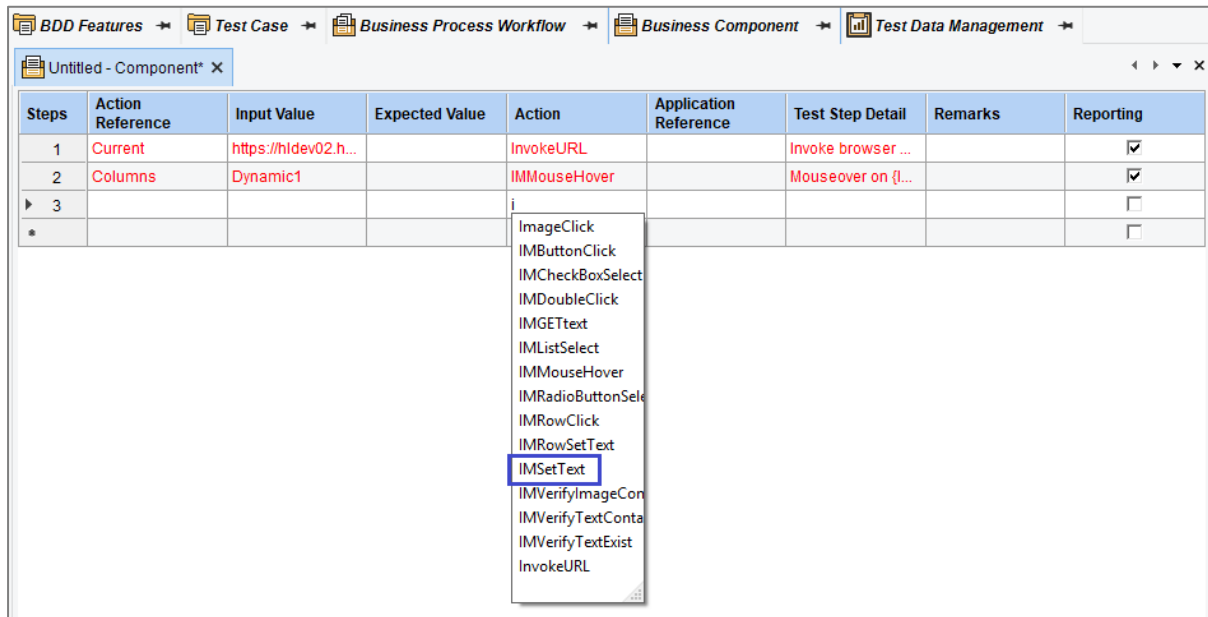

Figure 10: IMSetText 2

The snipping tool will be activated. . Click the **Snipping** tool icon.

4. Go to AUT.

5. Click **Snipping** tool.

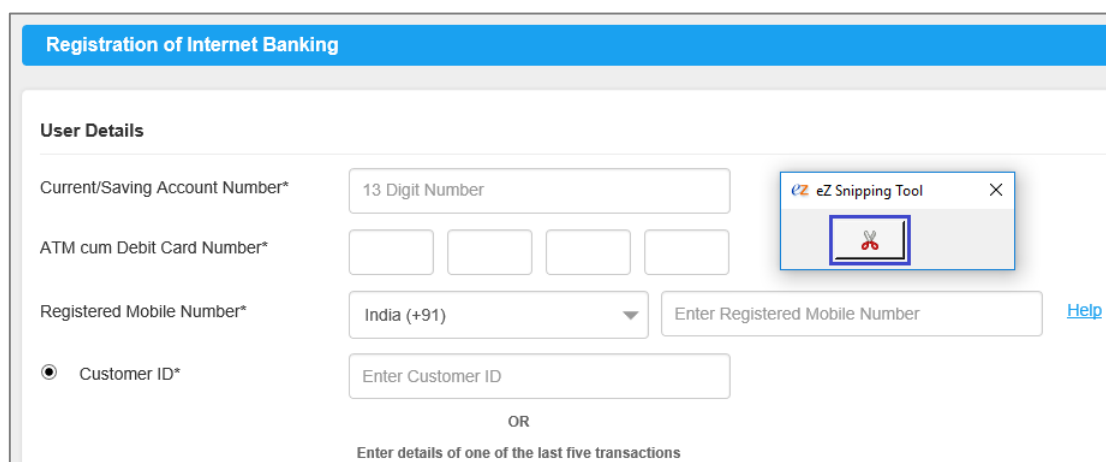

Figure 11: IMSetText 3

6. Select whole image and the field.

Figure 12: IMSetText 4

7. Go to Key Word Script table. In **Action Reference**, type **Current/Saving Account Number***.

8. In **Input Value**, type **1234567891234567**. This is the account number.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	Current	https://www.cana...		InvokeURL		Invoke browser w...		<input checked="" type="checkbox"/>
2	Current/Saving A...	1234567891234		IMSetText		Enter text {InputV...		<input checked="" type="checkbox"/>
...								<input type="checkbox"/>

Figure 13: IMSetText 5

9. Place cursor in **Steps** column of the step and right click. Click **Update Test Step Detail**.

Figure 14: IMSetText 6

Test Step Detail column will be updated.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	Current	https://www.cana...		InvokeURL		Invoke browser w...		<input checked="" type="checkbox"/>
2	Current/Saving A...	1234567891234		IMSetText		Enter text 123456...		<input checked="" type="checkbox"/>
▶▶								<input type="checkbox"/>

Figure 15: IMSetText 7

5.1.3 View IMSetText cut image

You can view image you cut. Purpose is only to verify the cut image.
Please follow steps given below:

1. Select the step in Keyword Script table. Click at **Pointer** under **Steps**, and right click.
2. Click **Show Image**.

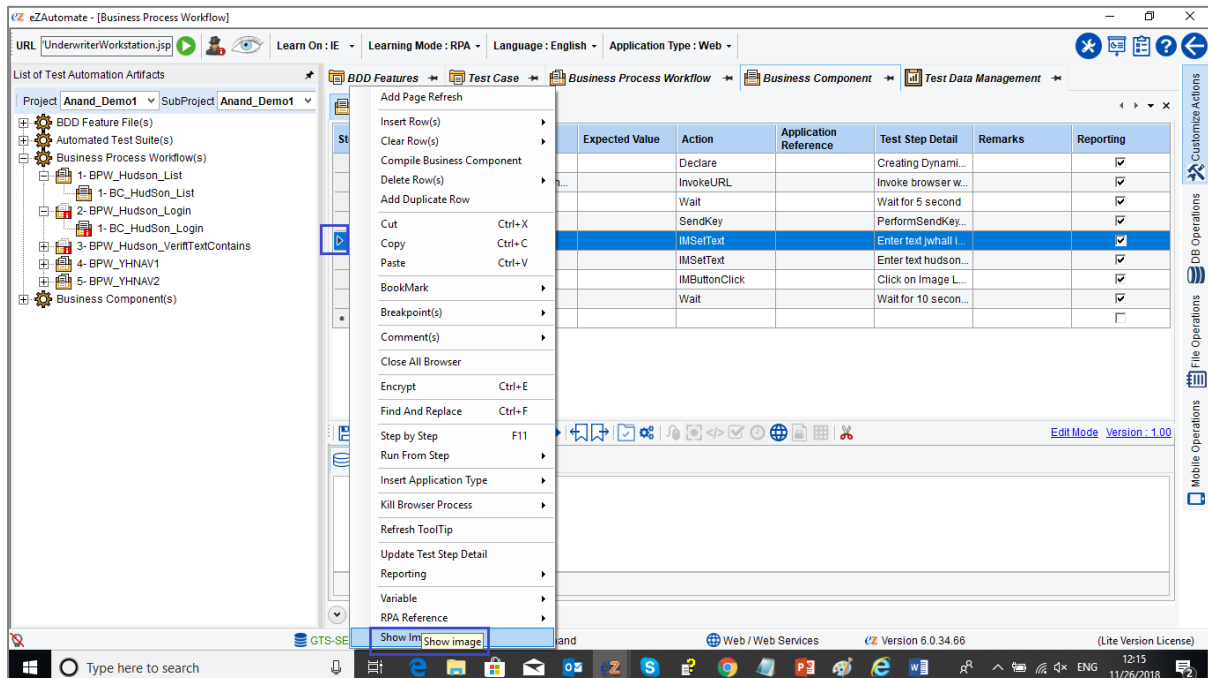

Figure 16: IMSetText 6

5.1.4 Button Click (Action- *IMButtonClick*)

Button Click can be used by the IM Action- **IMButtonClick** where you want to click button. Consider below example based on which you need to follow steps to capture. In this we will capture "I Agree" button.

Please follow steps given below:

1. Select the step in the Business Component where you want to insert **IMButtonClick** in Key Word Script table. Click **Pointer** under Steps column.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	[@showactionnot...	false		Declare		Creating Dynami...		<input checked="" type="checkbox"/>
2	Current	https://hdev02.h...		InvokeURL		Invoke browser w...		<input checked="" type="checkbox"/>
3		20		Wait		Wait for 5 second		<input checked="" type="checkbox"/>
4	Tab	1		SendKey		PerformSendKey...		<input checked="" type="checkbox"/>
5	UserName	jwhall		IMSetText		Enter text jwhall i...		<input checked="" type="checkbox"/>
6	Password	hudson2018		IMSetText		Enter text hudson...		<input checked="" type="checkbox"/>
7	Login			IMButtonClick		Click on Image L...		<input checked="" type="checkbox"/>
8		15		Wait		Wait for 10 secon...		<input checked="" type="checkbox"/>
								<input type="checkbox"/>

Figure 17: IMButtonClick 1

2. Enter first letter "I" in Action Column.
3. Select **IMButtonClick** from drop down.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	Current	https://hdev02.h...		InvokeURL		Invoke browser ...		<input checked="" type="checkbox"/>
2	Columns	Dynamic1		IMMouseHover		Mouseover on (l...		<input checked="" type="checkbox"/>
3				i				<input type="checkbox"/>
*				ImageClick				<input type="checkbox"/>
				IMButtonClick				
				IMCheckBoxSelect

Figure 23: IMButtonClick 7

5.1.5 View IMButtonClick cut image

You can view image you cut. Purpose is only to verify the cut image.
Please follow steps given below:

1. Select the step in Keyword Script table. Click at **Pointer** under **Steps**, and right click.
2. Click **Show Image**.

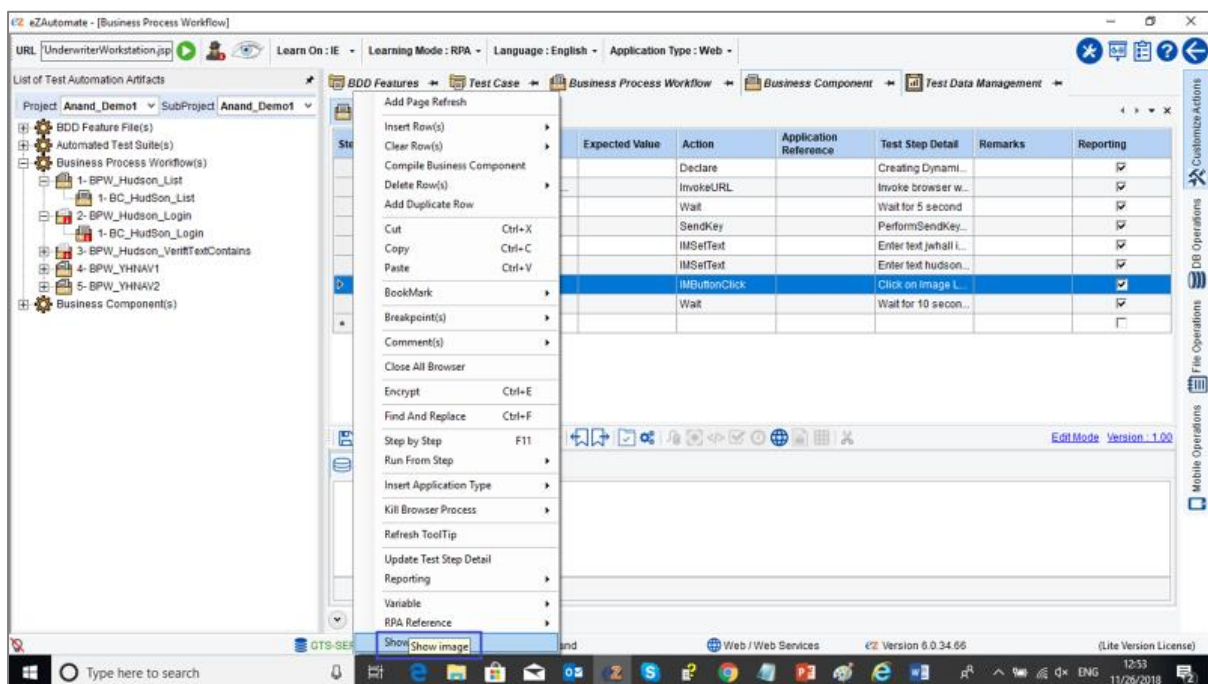

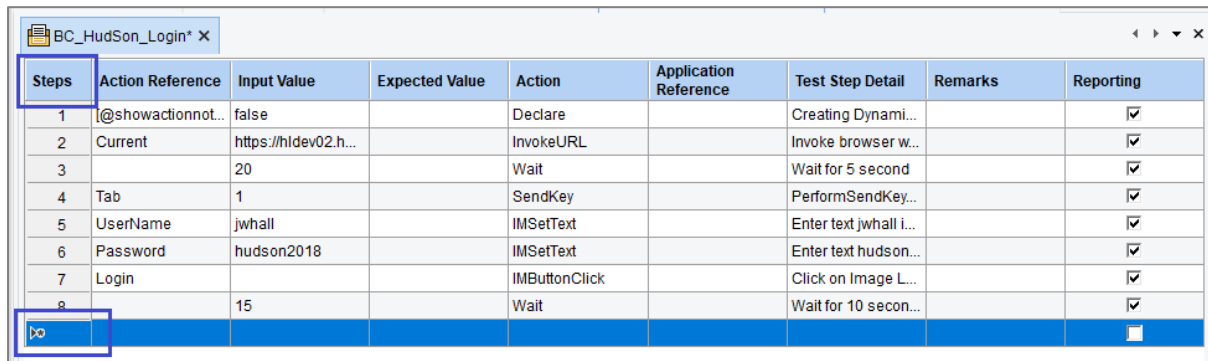

Figure 24: IMButtonClick 6

5.1.6 List Select (Action- IMListSelect)

List Select can be used by the IM Action- **IMListSelect** where you want to select value from drop-down. Consider below example based on which you need to follow steps to capture. In this we will capture country code for registered mobile number.

Please follow steps given below:

1. Select the step in the Business Component where you want to insert IMListSelect in Key Word Script table. Click **Pointer** under Steps column.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	@showactionnot...	false		Declare		Creating Dynami...		<input checked="" type="checkbox"/>

Figure 26: IMListSelect 2

The snipping tool will be activated. Click the Snipping tool icon.

4. Go to AUT.
5. Click **Snipping** tool.
6. Select whole image and the field.

The screenshot shows a web form with the following fields and options:

- Current/Saving Account Number***: A text input field with the placeholder "13 Digit Number".
- ATM cum Debit Card Number***: Four separate text input fields.
- Registered Mobile Number***: A dropdown menu showing "India (+91)" with a downward arrow. This field and its dropdown are highlighted with a red box. To its right is a text input field with the placeholder "Enter Registered Mobile Number" and a [Help](#) link.
- Customer ID***: A radio button followed by a text input field with the placeholder "Enter Customer ID".
- OR**: A separator text.
- Debit Transactions***: A radio button followed by a text input field with the placeholder "Debit Transactions".

Below the radio buttons, there is a text label: "Enter details of one of the last five transactions".

Figure 27: IMListSelect 3

7. In **Registered Mobile Number*** drop down select **American Samoa**.

Figure 30: IMListSelect 6

Alternate approach

We have an alternate approach for IMListSelect. Please follow steps given below:

- Declare a reserved dynamic variable (**[@ListSelectType]**) in **Action Reference** and keep value as **TypeTwo** in **Input Value** in Keyword Script table (As in Step 1 in below screen shot).
- Use **IMListSelect** action and crop image of above label only (As in Step 2 in below screen shot). It will click bottom of the provided label so automatically dropdown will get selected.
- After all list drop down selection of this page set reserved dynamic variable (**[@ListSelectType]**) as blank (As in Step 3 in below screen shot).

BDD Features → Test Case → Business Process Workflow → Business Component → Test Data Management →								
Untitled - Component* X								
Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	[@ListSelectType]	TypeTwo		Declare		Creating Dynami...		✓
2	CoverageType	PL - Named;1;+2		IMListSelect		Select text PL - N...		✓
3	[@ListSelectType]			Declare		Creating Dynami...		✓
4	[ImagePath]+Fac...	FacilityCoverage		CaptureScreen		Performed Captu...		✓

5.1.7 View IMListSelect cut image

You can view image you cut. Purpose is only to verify the cut image.

Please follow steps given below:

1. Select the step in Keyword Script table. Click at **Pointer** under **Steps**, and right click.
2. Click **Show Image**.

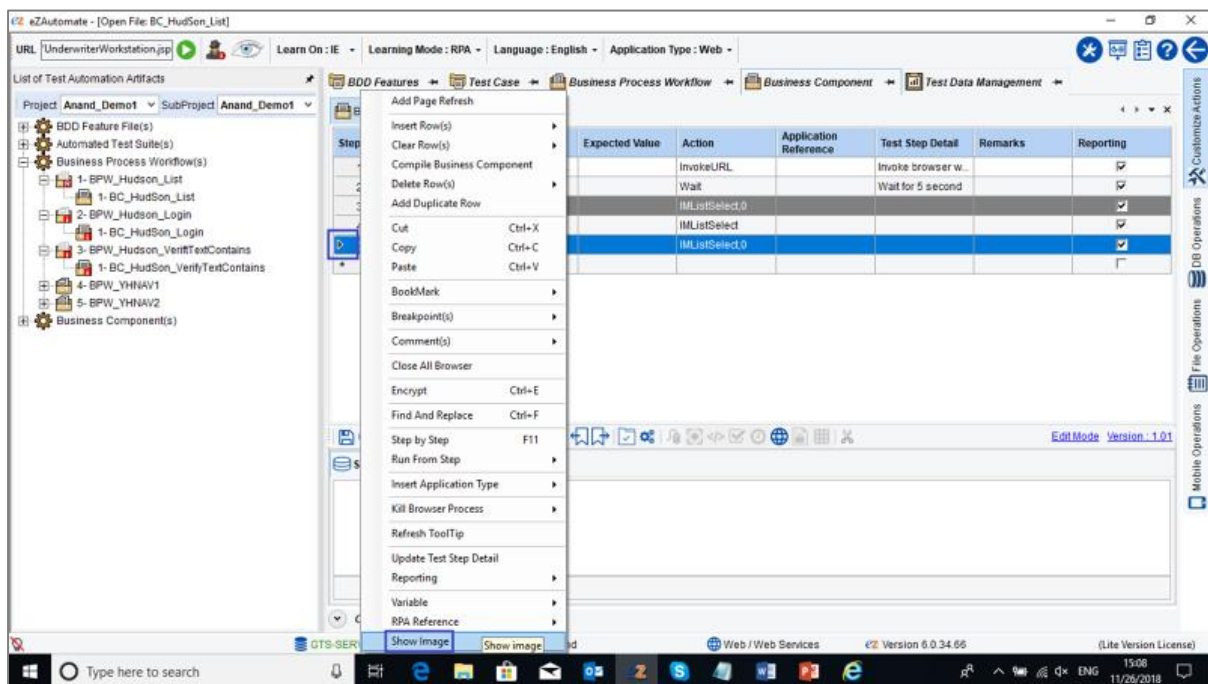

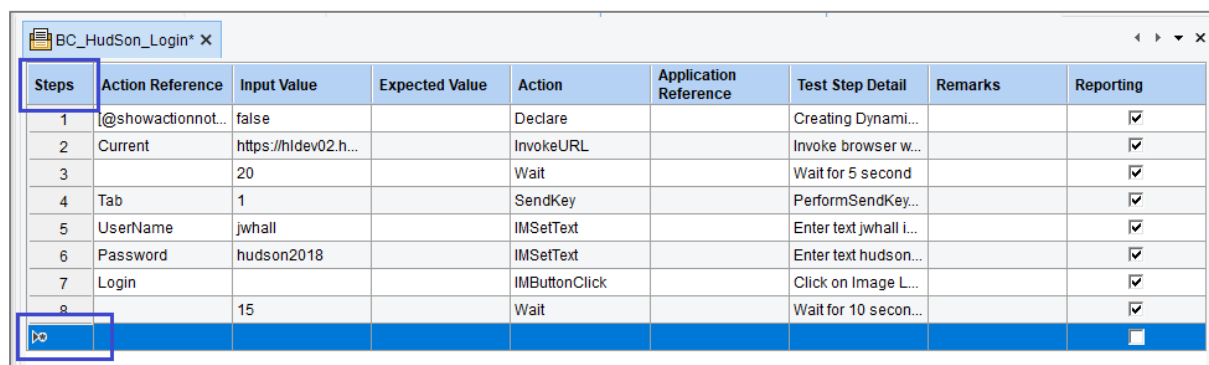

Figure 31: IMListSelect 6

5.1.8 VerifyTextContains (Action- IMVerifyTextContains)

Verify Text Contains can be used the IM Action- **IMVerifyTextContains** where you want to verify contains on web page. Consider below example based on which you need to follow steps to capture.

Please follow steps given below:

1. Select the step in the Business Component where you want to insert IMVerifyTextContains in Key Word Script table. Click **Pointer** under Steps column.

Steps	Action Reference	Input Value	Expected Value	Action	Application Reference	Test Step Detail	Remarks	Reporting
1	@showactionnot...	false		Declare		Creating Dynami...		<input checked="" type="checkbox"/>
2	Current	https://hdev02.h...		InvokeURL		Invoke browser w...		<input checked="" type="checkbox"/>
3		20		Wait		Wait for 5 second		<input checked="" type="checkbox"/>
4	Tab	1		SendKey		PerformSendKey...		<input checked="" type="checkbox"/>
5	UserName	jwhall		IMSetText		Enter text jwhall i...		<input checked="" type="checkbox"/>
6	Password	hudson2018		IMSetText		Enter text hudson...		<input checked="" type="checkbox"/>
7	Login			IMButtonClick		Click on Image L...		<input checked="" type="checkbox"/>
8		15		Wait		Wait for 10 secon...		<input checked="" type="checkbox"/>
								<input type="checkbox"/>

Figure 32: IMVerifyTextContains 1

2. Enter first letter "I" in Action Column.
3. Select **IMVerifyTextContains** from drop down.

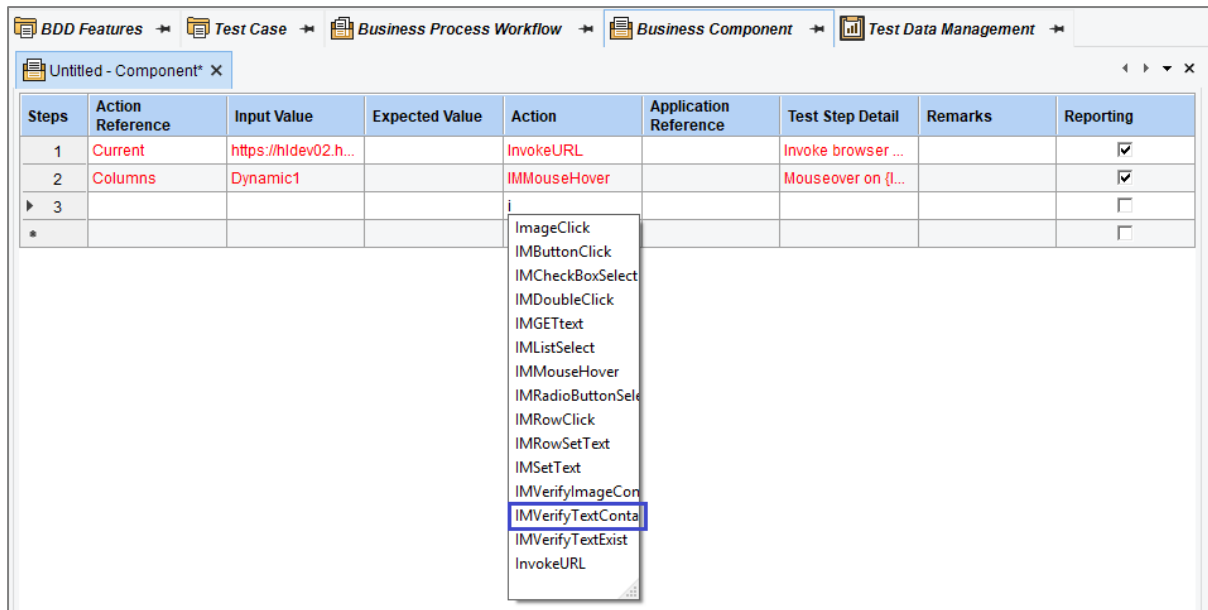

Figure 33: IMVerifyTextContains 2

The snipping tool will be activated. Click the Snipping tool icon.

1. Go to AUT.
2. Click **Snipping** tool.
3. Select whole image and the field (s).
